Additional Contempo Information

CONTEMPO GRILL FRONTS:

Contempo Grill fronts will only have the Aluminum or Stainless Steel frame on the bottom and 2 sides to make it easier to install the insulated jacket. The grill front is also attached to a 3/4" thick PVC panel, with pocket screws to facilitate simplified removal of the grill front for installation.

CONTEMPO DRAWERS:

All Contempo drawer fronts will be attached to a 3/4" PVC panel, to improve the structural integrity of our drawers.

BUMPERS:

All Contempo doors and drawers will have bumpers drilled into key areas of the cabinet face to ensure the fronts are parallel.

CONTEMPO CARE GUIDE AND WARRANTY:

Please refer to our DealerNet site in the Resources section (under Forms & Policies) and download the Contempo Door care guide and Contempo Door limited warranty for the aluminum & stainless frames.

Specifications

SPECIES AVAILABLE:  Euro

CONSTRUCTION: 1/2" thick high-pressure laminate (phenolic resin) door, with 1/32" micro chamfer on an ebony coloured polished edge

MINIMUM/MAXIMUM DOOR SIZE: Doors are fabricated, so sizes are limited by our panel sizes. Doors are heavy so weight limitations also apply

DRAWER FRONTS: 1/2" thick slab with micro chamfer edges

GRAIN DIRECTION, DOOR: Grain direction is vertical by default, but may be ordered horizontal

GRAIN DIRECTION, DRAWER: Grain direction is vertical by default, but may be ordered horizontal

FINISH OPTIONS: Available (see pages 20-21)

FINISHED BACK OF DOOR: Same finish as the front

DOOR STYLE FACTOR: Also applies to all panels and fillers

CROSS SECTION

Species shown: **Euro (Vertical)**
Finish: **Core Ash**

Additional Euro Information

Euro panels have an ebony coloured polished edge with a 1/32" micro-chamfer

EURO GRILL FRONTS:

Euro Grill fronts will need to be machined to install the insulated jacket. The grill front is attached to the cabinet with a 3/4" thick PVC panel, and has pocket screws to facilitate simplified removal of the grill front for installation.

Table saws offer the best results and Euro grill panels should be cut with the decorative side up. To further protect the surface finish, cut on top of a protective panel. Any sharp or rough edges can be removed with sandpaper or a router. Portable circular saws or jig saws (with a blade for decorative surfaces) may also be used (cut decorative side down). Masking tape can also be used to protect the surface. For more complete machining instructions, please refer to page 30 of this catalogue.

EURO DRAWERS:

All Euro drawer fronts will be attached to a 3/4" PVC panel, to improve the structural integrity of our drawers.

BUMPERS:

All Euro doors and drawers will have bumpers drilled into key areas of the cabinet face to ensure the fronts are parallel.

EURO PART AVAILABILITY:

Please note that the selection of panels, moldings and fillers are limited in Euro finish. Refer to our online ordering system (DealerNet) for current availability.

metro door

0%

DOOR STYLE FACTOR

Metro

Specifications

SPECIES AVAILABLE:  Metro

CONSTRUCTION: 3/4" thick marine grade high-density polyethylene (HDPE) door, with 1/32" micro chamfer on a smooth edge. Available in Metro and Metro Lite. Metro Lite has similar properties to Metro, but the material is 30% lighter than standard HDPE

MINIMUM/MAXIMUM DOOR SIZE: Doors are fabricated, so sizes are limited by our panel sizes.

DRAWER FRONTS: 3/4" thick marine grade high-density polyethylene (HDPE) drawer front, with 1/32" micro chamfer on a smooth edge

GRAIN DIRECTION (IF APPLICABLE), DOOR:

Grain direction is vertical

GRAIN DIRECTION (IF APPLICABLE), DRAWER:

Grain direction is vertical

FINISH OPTIONS: Available (see page 22)

FINISHED BACK OF DOOR: Same finish as the front

CROSS SECTION

Species shown: **Metro**
Finish: **Niagara Mist**

Additional Metro Information

Metro panels have a smooth edge with a $\frac{1}{32}$ " micro-chamfer

METRO GRILL FRONTS:

Metro Grill fronts will need to be machined to install the insulated jacket. The grill front is attached to the cabinet with a $\frac{3}{4}$ " thick PVC panel, and has pocket screws to facilitate simplified removal of the grill front for installation. Grill fronts on wood grain Metro cabinets wider than 54" will have a discreet seam.

Standard woodworking tools offer the best results for cutting Metro grill panels. Cutting can leave a burr on one edge and this can be scraped off carefully with a craft knife. Sanding edges will produce a rough, matte edge. Finer grit sandpaper or steel wool is recommended to reduce this and introduce some sheen back. Portable circular saws or jig saws (with a blade for decorative surfaces) may also be used. For more complete machining and installation instructions, please refer to page 31 of this catalogue and download the Metro installation guidelines from DealerNet.

METRO DRAWERS:

All Metro drawer fronts will be attached to a $\frac{3}{4}$ " PVC panel, to improve the structural integrity of our drawers.

BUMPERS:

All Metro doors and drawers will have bumpers drilled into key areas of the cabinet face to ensure the fronts are parallel.

METRO PART AVAILABILITY:

Please note that the selection of panels, moldings and fillers are limited in Metro finish. Refer to our online ordering system (DealerNet) for current availability.

finishes

choosing your finishes

CypressKast

TeakKast

NatureKast molded doors, drawers and panels are available in three distinctive finish categories to cater to the wide tastes in home decor, namely painted, weathered or stain & glaze.

Our doors are Kast from either Cypress or Teak masters and offer the characteristics of real wood without the limitations.

resin painted finish specifications

(AVAILABLE FOR SLAB, SHAKER, LOUVER, CONTEMPO & RUSTIQUE DOOR STYLES)

TECHNIQUE:

A base coat of paint is applied to the treated resin door followed by an exterior grade acrylic lacquer. This is followed by a UV inhibitor top coat.

DESIGN CONSIDERATIONS:

Doors painted in Super White will come standard with a white door back, all other paint colours, stain and glaze or weathered finishes come standard with black door backs regardless of cabinet interior colour.

PRIMER CONSIDERATIONS:

Primed doors allow you the freedom to finish the doors in any colour you choose using a high-quality exterior latex paint.

- Exterior grade primer is applied to front & back of doors/drawers
- Edge banding matches PVC cabinet box colour

euro finish specifications

(ONLY AVAILABLE FOR EURO DOOR STYLES)

30%

WOOD DÉCOR FINISH FACTOR

Euro

TECHNIQUE:

Layers of fibers are impregnated with thermosetting phenolic resins. Surface decorative finish layers are then applied on both sides and a transparent topcoat is added to the surface layers. This is cured to enhance weather and light protecting properties. The panels are then subject to high heat and pressure to bond the material into a non-porous, homogeneous material that is dense and perfect for outdoor surfaces like our cabinetry

DESIGN CONSIDERATIONS:

Euro doors, drawers and panels are available in Wood Décors and Pure Accents with a sleek, ebony polished edge, offering a clean, contemporary look.

finishes

metro finish specifications

(ONLY AVAILABLE FOR METRO)

Metro

TECHNIQUE:

Metro doors & panels are produced from 3/4" thick high-density polyethylene (HDPE) with a textured, decorative surface on two sides & a 1/32" micro chamfer on the smooth edges. This material was developed for marine applications (UV stable, rigid and scratch resistant) making it perfect for outdoor surfaces like our cabinetry. Metro Lite shares most properties with Metro, but sheets are produced at lower density

DESIGN CONSIDERATIONS:

Metro doors, drawers and panels are available in low sheen Wood Grain and Solid Colours with a smooth edge – offering a clean, contemporary look.

specifications

pvc cabinet construction specifications

CUSTOMIZATION

Customization options for NatureKast® cabinetry are indicated in our modification section. Cabinet depth modifications are available. Cabinet width and height increase or decrease modifications are NOT available for molded doorstyles, but is available for other doorstyles.

1. CABINET BOX:

- Cabinet sides, top and floor are constructed with 3/4" thick, 100% closed cell PVC (available in white or black) using adhesive with weld-like bonding and stainless steel screws

2. CABINET TOP:

- Wall and tall cabinets have a full PVC top. Base, grill base and burner base cabinets have 3/4" x 4 1/4" PVC stretchers fastened in place between the cabinet sides

3. CABINET BACK:

- All cabinets have a 3/4" thick PVC back

4. SHELVES:

- Shelves are 3/4" thick PVC. There is continuous shelf hole drilling in 1 1/4" increments, starting 7" from the bottom of the cabinet to 7" from the top. Base cabinet and 24"D tall cabinet shelves are inset 3 1/2" from the front of the cabinet. Shelves in wall cabinets and 12"D tall cabinets are inset 1/8" from the front of the cabinet. The shelves are held in place with a metal pin and a removable white "V" shaped shipping retainer

5. DRAWER BOXES

- Standard drawer boxes are constructed with PVC sides, back and a 3/4" PVC floor. Full extension soft-close stainless steel side mount slides are used

6. DOOR HINGES

- Hinges are soft-close stainless steel 110° concealed hinges with 6 way adjustment

7. FINISHED ENDS:

- Finished ends can be purchased loose or factory applied. Finished end panels are the thickness of the species panel, which adds to the overall width of a cabinet

8. EDGE TAPE:

- A closely matching PVC edge tape is applied to the front edges of the cabinet sides, top and bottom edges

- **All Euro orders will have black edge tape on cabinet boxes**

9. TOE KICK:

- All base & tall cabinets are constructed on adjustable leg levelers secured behind a 2 1/4"H PVC skirting

cabinet standards

GENERAL SPECIFICATIONS:

NatureKast® manufactures our cabinet boxes using ¾" PVC. This PVC MUST be 100% covered by our doors and panels (when placed in direct sunlight) to protect the PVC parts from movement under the high temperatures of direct sunlight, as well as colour bleaching on the black PVC in direct sunlight. Failure to cover our PVC components will void the warranty of the exposed PVC components. The tops of PVC cabinet boxes must be shaded from direct sunlight before counter tops are installed. Furthermore, the tops of wall and tall cabinets may also require finished panels if they are installed in direct full sun exposure

CABINET SIZES:

Molded doorstyles are available in sizes listed only. To increase the depth of a cabinet, modification charges will apply. See modification section for up-charges.

DIMENSIONAL TOLERANCES:

Both black and white cabinet constructions are manufactured using PVC components. This PVC is rigid and is not subjected to the same expansion and contraction issues as wood products, therefore the tolerance for both black and white PVC is $\pm \frac{1}{16}$ ". All cabinet construction types will have a $\pm \frac{1}{32}$ " height tolerance. All cabinetry will have the floors and cabinet tops flush (in the vertical direction) with the cabinet sides. The floors will be flush with the cabinet sides, or inset up to a maximum of the thickness of any applied edge tape.

MINIMUM CABINET WIDTH: With doors: 9"W based on the minimum width of available door styles. With drawers: 12"W.

MAXIMUM CABINET WIDTH: To be warrantied, the maximum width of a specific cabinet type is the width listed as the largest available.

MINIMUM HEIGHT: With doors: 18"H.

MAXIMUM HEIGHT: 90"H (plus adjustable leg levelers) for our tall cabinet and Ultimate Outdoor Games cabinets.

STANDARD CABINET DEPTHS (DEFAULTS):

Wall cabinets: 12"D | Base cabinets: 24"D | Grill base cabinets: 28"D | Burner base cabinets: 24"D | Wall depth tall cabinets: 12"D | Base depth tall cabinets: 24"D.

STANDARD CABINET HEIGHTS (PLUS ADJUSTABLE LEG LEVELERS):

Grill cabinets: 30"H | Base cabinets: 30"H | Tall cabinets: 90"H.

MINIMUM DEPTH: With hinges: 5"D with cabinet back, 4"D with no back. With drawers: 12"D with 10" full extension drawer slides.

MAXIMUM DEPTH: 32"D. When the depth is increased for cabinets with drawers and/or roll out drawers, the drawer box depth remains 550mm (approx. 22") regardless of cabinet depth.

FINISHED ENDS:

NatureKast® provides finished ends as an applied panel. These panels may be applied during manufacturing (subject to additional up-charges) and will add ¾" to the width of the cabinet per finished side for resin and Metro panels and ½" per finished side for Euro panels. Decorative overlay doors can also be used. These are installed on site and will add the standard thickness of the door selected (1" for standard resin doors, ⅞" for Contempo doors).

TOE KICK:

NatureKast® provides PVC leg levelers that are adjustable from 4"H to 7 ½"H. We offer toe kick planks in heights of 5" or 7"H. These can be cut on site to level against concrete floors and decks.

CABINET EDGES:

Cabinet edges (side, top, bottom and any fixed floors) are edged with a close matching PVC edge tape. Shelves have a PVC edge tape leading edge that matches the interior of the cabinet – black or white.

GRILL CABINETS: The front and back stretchers of grill cabinets wider than 30" will be reinforced with 2 aluminum L-profile rails for additional strength.

door & drawer standards and pricing explanation

Door & Drawer Standards

REVEALS:

Our door and drawer sizes are approximately $\frac{1}{8}$ " less in width and in height than our cabinet dimensions. We position the fronts so that there is a $\frac{1}{8}$ " reveal at the top of the cabinet, $\frac{1}{16}$ " reveal on each side and zero reveal on the bottom of each cabinet.

DIMENSIONAL TOLERANCES:

Resin doors

Our doors and drawers are constructed using durable high density resin. Each door or drawer is created using a specific size mold. The width, height and thickness of the fronts can vary (although this is not common) from door to door and drawer to drawer up to $\frac{3}{16}$ ". Slight bowing can also occur: doors and drawer fronts under 24" width or height have a tolerance of $\frac{1}{16}$ " or less. Doors over 24" width or height, can vary up to $\frac{1}{8}$ ". This is measured in the middle of height or width in question. Anything over this tolerance is under warranty for replacement.

Euro doors

Our Euro doors and drawers are constructed using durable high pressure laminate (HPL). Each door or drawer is cut from a large sheet, and an ebony coloured edge profile is left polished and has a $\frac{1}{32}$ " micro chamfer.

Metro doors

Our Metro doors and drawers are constructed using rigid marine grade high-density polyethylene (HDPE). Each door or drawer is cut from a sheet and finished with a smooth edge, colour-matched core and a $\frac{1}{32}$ " micro chamfer. Very slight bowing can occur: doors and drawer fronts under 24" width or height have a tolerance of $\frac{1}{16}$ " or less. Doors over 24" width or height, can vary up to $\frac{1}{8}$ ". This is measured in the middle of height or width in question. Anything over this tolerance is under warranty for replacement.

Drawer Box Standards

GENERAL CONSTRUCTION:

Our drawer boxes are constructed using PVC for the sides, front, back and bottoms. The top edges of the drawer boxes are eased and sealed. We use 22"D, 35kg (77lb) capacity full extension soft-close stainless steel drawer tracks for all standard drawers. There are 2 drawer box heights, 4"H for top drawers and 8"H for deep drawers.

SLIDE OUT TRAYS:

Our slide out trays are constructed using $\frac{1}{2}$ " PVC for the sides and back with $\frac{3}{4}$ " thick scooped front and bottoms. The top edges are eased and sealed. We use 22"D, 35kg (77lb) capacity full extension soft-close stainless steel drawer tracks. Slide out trays are either 4"H or 8"H.

Pricing

PRICING EXPLANATION:

The prices listed in this catalogue are subject to door style up-charges and finish up-charges in the following manner:

- Cabinets with doors will have the door style and finish up-charge applied
- Cabinets without doors will only have the finish up-charge applied
- Finished items that are not doors such as fillers, pilasters, moldings etc., will only have the finish up-charge applied, except for Euro panels, pilaster and fillers which always also have the door factor due to extra finishing required
- Unfinished items such as waste bins, tray dividers, slide-out trays etc., will have neither the door style nor the finish up-charge applied

While great care has been taken to ensure the accuracy of this Catalogue, NatureKast® does not guarantee the product prices, specifications and or graphics as they may contain technical inaccuracies or typographical errors. NatureKast® also reserves the right at any time to correct errors and adjust prices to account for circumstances beyond our control.

general design considerations

Designing an outdoor kitchen is very different to designing an indoor kitchen. Priorities change when planning storage areas and placement of appliances. There are more safety requirements to consider with the high BTU grills and burners. Ventilation can be critical to the design so as to prevent outdoor gatherings from being smoked out. The following is a list of points to design a safe, efficient and attractive outdoor kitchen:

- While being more resistant to heat than wood, NatureKast® resin and polymer products are classified as combustible material and require all grills and certain insert cooking appliances to have an insulation jacket (zero clearance kit). Most grill manufacturers provide them. Any substituted insulated jacket, not supplied by the grill manufacturer will void the warranty
- From our experience, the cut-out specifications for insulation (zero clearance) jackets can require the grill base to be anywhere from 6" to 12" wider than the grill. **It is absolutely essential to consult your grill manufacturers' specifications** when selecting an **appropriate grill cabinet size** to properly house the grill and insulation jacket and to familiarize yourself with any other safety considerations
- Grills normally require a minimum of 3" behind the grill to open the lid against a wall totaling $\pm 27"$ depth. NatureKast® offers panels and pilasters to finish the extended sides of the grill when bumped out to 28". Please allow for this material thickness to cover the exposed sides in your design
- Keep a minimum of 6" between side burners and grills. Design side burners opposite the rotisserie motor on the grill
- Keep fryers a minimum of 12" from any open flame burners or grills. Flames can ignite fryers in high wind situations
- If the outdoor kitchen is under cover and does not have good cross ventilation, an exhaust hood will be required to prevent smoke from collecting in the kitchen and entertainment areas. Hoods comprise three main parts: the liner, the hood insert and the blower. The liner is a stainless steel ceiling with a cut out into the bottom hood which should be at least 4" deep to trap the smoke to be dispersed. The hood insert is the part containing the filters and light and is connected to the blower. As a general guideline, the blower should be a minimum of 1000 CFM, but please compare your grill and blower manufacturer specifications along with local codes, etc. The blower can be located on the insert or can be used in a remote location that has access, such as an attic, exterior wall or on the roof (to keep the noise of the blower out of the cooking area). Remote switches are available for blower and lights; to prevent reaching over a hot grill to turn on lights or blower
- Hoods are normally installed 36" above the cooking surface. This distance is required for hoods built with combustible materials; however, consult your local building codes for specific rules
- Higher BTU power burners are often used for seafood boils, or for deep frying. These burners are wider than the standard side burners and require an insulated jacket due to their high BTU rating. Tall pots are used for this type of cooking so a lower cabinet allows easier access to the top of the pot. NatureKast® offers a 30" wide power burner base that is only 28 ½" tall. If the power burner is to remain at the same height, NatureKast® offers two 24" wide burner bases that will work with most power burners. The granite, or any non-combustible materials, must be used on either side and back that is lowered. Check specifications on burners to determine the distance to the non-combustible sides and back when lowering a burner
- Ceramic grills are becoming more and more common and can be built into the cabinets. The most common ceramic grills require a full 10" clearance (double check this dimension with the specific grill size) behind the grill for the ceramic dome lid to open. With 22" being the most common ceramic grill width, the cabinet will need to be approximately 34" deep (again double check this dimension with the specific grill size). Determine if this space allows this depth in your plan. Ceramic grills can be built into a lowered cabinet for the cooking grate to be a comfortable height. Use a minimum of 27" width for dropping a ceramic grill in the design. Adjoining 24" deep cabinets can be pulled to 34" to eliminate the deep step out of the ceramic grill cabinet. If there is not enough space to pull the cabinets out, NatureKast® has created the first bowed front ceramic grill cabinet that allows the drop-down ceramic grill cabinet to be a standard 24" deep to match adjoining bases and bows out to 34". This bowed unit allows for proper depth and height of the ceramic grill. The bowed cabinet also adds a unique design element to the plan. A non-combustible counter is required on the lower bowed base platform
- When designing islands or peninsulas that are not attached to walls, it is recommended that you order 7" x 96" PVC planks to make a toe kick assembly. This replaces the adjustable leg levelers and allows installers to secure the toe kick frame to the floor. Another option is to set the island or peninsula using the adjustable leg levelers. PVC bracing can be added to secure cabinetry to the floor. Bracing can be trimmed-to-fit and glued to the bottom of the cabinet. This is not necessary when cabinets are secured to a wall

installation considerations

DISCLAIMER

If you are unable or unqualified to properly and safely install NatureKast cabinetry, please do not. It is recommended that you hire professional installers and qualified service providers for the installation of NatureKast products.

Naturekast installation instructions are meant to act as a guide and do not replace or excuse your responsibility for compliance of, including but not limited to, all safety regulations, local building codes, zoning, HOA rules and other conditions or restrictions specific to your installation. You are responsible for obtaining your own permits and submitting related fees where applicable. If your installation requires the alteration or modification to the property, including but not limited to, leveling of surfaces, moving of structural fixtures, gas, electrical, water or any other services, NatureKast disclaims all liability for any expenses, permits, fees or repairs that could be required as a result.

NatureKast shall not be liable for loss of time, inconvenience, commercial loss, damages and other losses associated with construction delays or otherwise, or any consequential damages or other losses suffered by the owner in relation to the installation of NatureKast product.

The NatureKast Limited Warranty does not extend to any matters resulting from the modification, alteration, or the unintended use of NatureKast products. NatureKast shall not be liable for any incident resulting in injury or death as a result of the installation or improper use of NatureKast product.

installation

Working with NatureKast® cabinetry is something many cabinet installers may not have experienced. The following information provides guidelines when working with PVC, resin, phenolics and HDPE:

GENERAL INSTALLATION GUIDELINES

- Machining should only be done by a professional cabinetry installer or licensed contractor using proper equipment
- Use stainless steel screws and washers for installation and hardware
- Grill panels are loosely attached, so they may be removed in order to trim and fit to the grill. Reattach the trimmed grill panel to the PVC cleats and stretcher using the supplied pocket screws and L-brackets

PVC BOXES AND PARTS

- Bonds with clear PVC cement to create a strong bond in minutes
- Very easy on tools. Saws and machines similar to MDF with smooth, non-splintered, chip free cuts
- Cleans with soap and water. Use denatured alcohol for greasy spots
- Use PVC planks and panels for blocking void corners for counter tops, L-shape bracing between adjustable leg levelers and for miscellaneous blocking
- All cabinet backs are 3/4" PVC. No nailers are required. Screws will hold anywhere on the back panel when attaching to walls or other fixed structures.
- Washers are recommended for mounting wall cabinets and applications that don't require counter-sinking of the screw head
- Bases come with adjustable leg levelers, making installation easy on sloped floors. These are installed at NatureKast® so no measuring is required for leg placement
- For convenience, use our PVC toe kick skirting surrounding the leg levelers to attach the toe-kick below the cabinets

HI-DENSITY RESIN

- Use Gorilla glue (activated with moisture) to adhere resin to resin
- Use polyurethane adhesives to adhere resin to PVC. We recommend NP1 or PL Premium for this purpose
- Clean with warm water and mild detergent. Please avoid abrasive cleaning agents and power washers
- Touch-up for scratches or small chips is the same procedure as touch ups for real wood products. NatureKast® offers touch up kits for all finishes
- Resin cuts much easier than wood and is easy on tools. Blades last much longer due to this resin material
- Resin fillers come attached to PVC backers. Attach fillers with PVC backer flush with front of cabinet box. Fillers are very easy to scribe to non-plumb walls
- Hardware screws need to go through resin drawer fronts and PVC drawer box to be secure. Use stainless steel screws and washers

HIGH-PRESSURE LAMINATE (EURO)

- Working with HPL is comparable to machining high quality hardwood. Carbide tipped tools (for metal working) are recommended
- Use outdoor panel adhesives to adhere Euro doors, drawers and panels to PVC. More info is on page 30
- Do not use abrasive cleaning agents. If required, Euro can be cleaned with citrus-based household cleaners

HIGH-DENSITY POLYETHYLENE (METRO)

- HDPE machines similarly to MDF. Use regular woodworking tools for best results
- Mechanical fasteners are recommended as Metro panels will not bond with regular construction adhesive
- Specific HDPE adhesives are available when mechanical fasteners can not be used
- HDPE can be cleaned using a mild detergent and dried with a soft towel
- Do not paint or stain HDPE - the surface resists adhesion to most regular paint and adhesives

Please refer to our DealerNet website (www.naturekastorders.com) in the 'Resources' section (under Forms & Policies) to download the Contempo Care and Use guide and the Euro Machining, Installation and Care guide

working with our Euro HPL panels

This guide is intended to provide some more general information as to the intricacies of working with our Euro doors and panels.

GENERAL INSTALLATION GUIDELINES

- While Euro panels will withstand the harshest weather conditions, the material **can expand and contract very slightly**, depending on humidity. This variance is only **0.021" per linear foot** (measured outwards from a center point of the panel). Please factor this into the design when installing Euro cabinetry. There is no expansion in thickness
- Please factor this expansion when producing butt joints with Euro panels. A 1/8" gap is recommended between larger panels
- The surface of Euro panels has been cured to produce a ultra tough surface, which will dull kitchen knives if used as a cutting surface. While this fact remains, Euro panels should not be stored directly on top of other Euro panels as the faces on these tough surfaces can scuff each other, similar to diamonds cutting other diamonds. When handling, panels should be lifted where possible rather than sliding on the decorative surface.

SAWING

- Euro panels can be cut on stationary circular saws, portable circular saws or jig saws using carbide tipped blades
- Cut at 23 - 72 ft/min. Cutting too fast or too slow can result in the panel edge changing colour due to excessive heat. The discoloured edge can be routed/sanded off, but cutting at the correct speed with a sharp blade can prevent this
- Entering tooth should be at the decorative side of the Euro panel. Circular saw blades should be set at a height of at least double the panel thickness.

FINISHING

- Cut edges are dangerously sharp and need to be eased. We recommend routing the edges or breaking the edge with sand paper.

DRILLING

- Use a carbide-tipped HSS-drill with a top angle of 60-80°.

FIXING

- Stainless steel screws offer the most secure way of attaching Euro panel/fillers/overlay doors to our cabinetry, but allow for panel expansion
- Carefully drill a pilot hole first. Stainless steel self tapping screws are a good option as Euro panels produce a fine thread and can be tapped.

BONDING

- Do not try to bond in rain or high humidity. Both surfaces should be clean and dry
- For additional adhesion, the back of the panel may be roughened with sandpaper to ensure the adhesive bonds well to the surface
- The Euro panel must be dry, clean and free from dust and grease
- Clean the surface of the Euro panel well with denatured rubbing alcohol. Wipe off with paper tissue or a clean, lint-free cloth. Allow alcohol to dry fully
- Once the Euro surface is prepared, apply a thin layer of adhesive across the surface of the panel and clamp for up to 24 hours. We recommend Tweha PanelMate adhesive, SikaTack panel adhesive or Simson PanelTack. Adhesive will skin in about 10-15 minutes, but it is important to clamp the piece until the adhesive has properly cured to prevent the panel from shifting/sagging due to the heavy weight of the panels
- Apply between +5°C and +30°C
- Adhesives can typically operate between -40°C (-40°F) to 90°C (194°F)
- For certain applications requiring immediate fixing, Tweha tape or Sika Fixing Tape could be applied between lines of adhesive, but this will result in a 1/8" standoff between the surface substrate and the Euro panels

Please refer to our DealerNet website (www.naturekastorders.com) in the 'Resources' section (under Forms & Policies) to download our Euro Machining, Installation and Care guide.

working with our Metro and Metro Lite HDPE panels

Below you will find general guidelines for working with our Metro and Metro Lite doors and panels.

GENERAL INSTALLATION GUIDELINES

- Design for installation. Please familiarize yourself with HDPE's properties – especially thermal expansion and contraction
- Consider using our expansion fillers for back panels (see page 128-129)
- Do not paint or stain HDPE - the surface has very low surface energy and resists adhesion to most regular paints and adhesives
- HDPE can be cleaned using a mild detergent and dried with a soft towel or chamois
- HDPE is resistant to harsh chemicals and most stains can be removed simply with regular household cleaning products
- A soft bristle brush can be used for hard-to-clean spots

SAWING

- Cutting a test piece prior to production is recommended
- Standard woodworking tools offer the best results for cutting Metro panels
- Carbide tipped tools are recommended
- CNC routers can achieve a very smooth edge, but table saws, radial arm saws, panel saw, band saws or jig saws (with a blade for decorative surfaces) may also be used
- Tools should be sharp to ensure adequate chip removal, which helps eliminate heat build-up
- Dull tools or an improper feed rate can lead to rough edges and heat build-up to the point where the chips start to melt and refuse
- Cutting can leave a burr on one edge and this can be scraped off carefully with a craft/box knife

FINISHING

- After cutting, the edges should be broken with a micro chamfer as cut material can be sharp. Sanding Metro edges will produce a rough, matte edge. Finer grit sandpaper or steel wool is recommended to reduce this and introduce some sheen back
- An iron and parchment paper can help get more sheen back on the sanded edges

DRILLING

- Use a carbide-tipped HSS-drill with a top angle of 90-110°, together with a peck drilling technique to reduce chip wrap on the drill bit

FIXING

- Stainless steel screws or nails/staples may be used to fasten HDPE material: pre-drilling is recommended
- Threaded inserts may also be used, but the holes should preferably be drilled 1" from the edge of the material

BONDING

- HDPE is difficult to bond due to the low surface energy (slippery surface). For this reason, HDPE will NOT bond with regular construction adhesive
- When bonding HDPE to PVC or HDPE to HDPE, we recommend 3M's DP-8010NS or B-45 (from Reltec llc). Both are two-part adhesives, which have been specifically formulated for HDPE and bond well to PVC and other materials without requiring surface treatment
- HDPE may also be welded to HDPE using a variety of techniques like hot gas welding, notch welding, bend welding or extrusion welding – but these techniques require special equipment and expertise

Shaker: Raven Ash

grill base cabinets

grill base specifications

☑ NatureKast® grill and side burner bases range in size options from 15" to 90" wide and are constructed from 3/4" black or white PVC panels that are 100% closed cell, making them completely weatherproof.

- These grill bases should be ordered according to the size of your grill and insulation jacket. If we do not offer the exact size, please choose the next size up. Our grill bases come standard at 28" deep for proper distancing, allowing lids to open unhindered. Our burner bases are 24" deep
- Insulated jackets are required with our cabinetry. Note: Basic rule of thumb is to add 6" to the width of the grill in your design to allow for the jacket. Some manufacturers (such as Lynx) require the use of oversized jackets with their grills. Please be sure of the manufacturer's specified cut-out size before ordering your cabinet
- Cabinet gables have grill front mounting cleats (3/4" thick) to allow for easy installation of the grill fronts. Please factor this into your choice of cabinet size
- The **available cut-out width** for the insulated jacket is as follows: **cabinet width - 1 1/2"** (for the gables) - **1 1/2"** (for the grill front mounting cleats)
- The lower stretchers of grill cabinets with doors 21" or wider will be reinforced with 2 aluminum L-profiles for additional strength
- All grill base cabinets have a second upper stretcher to support grills. These can be removed, if extra depth is required
- Grill panels will match door thickness and are easily cut on site to fit each grill. All grill bases come with solid grill panels
- In most cases a standard **propane tank** can be tilted and inserted into our standard grill or we also offer propane pull-outs with larger door
- Standard grill cabinets are 30"H plus an adjustable leg leveler (standard toe kick is 4 1/2"H)
- Bottom and side edges have door matching integral edge details.
- The **grill fronts for Metro wood grain grill cabinets wider than 54" will have a seam/seams**

Front panels are shipped fully intact and are to be cut on site to custom fit each grill.

PVC risers are trimmed on site to provide the proper grill height. The stretcher and riser system allows air flow for proper ventilation. **Place risers near to/above the partitions**

Ventilation screens are installed into the bottom of all grill base and burner base cabinets in order to prevent potential gas build-up within the cabinets.

Our innovative grill bases allow for flexibility, and we have a vast array of sizes to fit any burner or grill.

fitting your grill & insulated jacket, or burner

Grill insulated jackets are required for our cabinetry. Please ensure your selected cabinet will fit the grill manufacturer's specified cut-out size before ordering your cabinet.

NatureKast® recommendations:

- Select a cabinet that is at least 3" wider than the grill's insulated jacket or burner
- Add ±2" to the insulated jacket's height, minus your countertop thickness to determine whether you will need a Standard, Large or Extra Large front panel on the cabinet (front panel heights noted in diagrams below)

Standard Grill/Burner Base Cabinet

Design Considerations:

- **Front panel is 11 7/8"H**
- Panel is cut on site to fit individual grills
- **Doors are 17 7/8"H**
- **Upper drawer is 5 7/8"H**
- **Lower drawer is 11 7/8"H**

Page 36 - 43

Large Grill/Burner Base Cabinet

Design Considerations:

- **Front panel is 14 7/8"H**
- Panel is cut on site to fit individual grills
- **Doors are 14 7/8"H**
- **Upper drawer is 5 7/8"H**
- **Lower drawer is 8 7/8"H**

Page 43 - 48

Extra Large Grill/Burner Base Cabinet

Design Considerations:

- **Front panel is 17 7/8"H**
- Panel is cut on site to fit individual grills
- **Doors are 11 7/8"H**
- **Both drawers are 5 7/8"H**

grill base with propane pull out

Left Propane Pull Out

CTEM

item-code	price
GBPPO3628L	2125+606*
GBPPO4228L	2428+606*

Right Propane Pull Out

CTEM

item-code	price
GBPPO3628R	2125+606*
GBPPO4228R	2428+606*

Design Considerations:

- Cabinets are 28" deep
- **Front grill panel is reduced in height to 9 7/8" to allow for the taller doors that are required for the propane tank pull out**
- Check the height specifications on the grill insulation jacket to make sure it will fit
- Doors are 19 7/8"H (19 7/8"H clearance needed for the propane tank)
- Panel can be cut on site to fit individual grills
- Propane slide out is a 3/4" thick cabinet line match PVC tray, with a routed hole capable of accepting bottom flange of standard 20 lbs BBQ propane tank. Standard propane tanks are ±17 3/4"H
- Please check grills specs for gas outlet side, in order to determine the best side for the pull out

Partition:

- There is a partition separating the doors for all cabinet sizes

grill accessories

Organizer Pull Out

ceramic grill cabinets

ceramic grill cabinet specifications

- NatureKast® has introduced the first bowed front ceramic grill that allows your base cabinetry to be the standard 24" depth and projects the grill out to allow clearance.
 - Normally, ceramic grill cabinets are 30" - 32" tall (including counter tops) for comfortable grilling height. The problem is your counter top height is then too low for cutting and preparing food. With the new suspended ceramic grill by ■ NatureKast® the counter top can be a standard kitchen height and the grill is adjusted to the perfect height
 - Create your own look and style using our suspended ceramic grill cabinet between panels, posts, or cabinets
 - When installing the countertop, please consult the ceramic grill manufacturer's air clearance gap required to countertop. Typically please allow 1 - 2" of air space between the ceramic grill and the countertop to prevent heat transfer
 - Ceramic grills can require up to 10" clearance behind the grill for the ceramic dome lid to open when the cabinet is against the wall
 - All ceramic grill cabinets require that the ceramic grills are supported by a non-combustible lower shelf.** We recommend the same material as the counter top. **In addition most grill manufacturers offer support for their ceramic grills (table nest, feet, stand, etc).** **These MUST be used when installing in a built-in combustible cabinetry**
 - Ceramic grills are available in a variety of sizes. Please ensure your selected cabinet satisfies all the grill manufacturer's specifications.

Deep storage drawers on cabinets like our CGCD36 grill cabinet provide a smart solution for quick and easy storage.

Using the suspended ceramic grill cabinet, the height of the cooking surface can be set to fit the cook, while keeping preparation areas the proper height.

* While we have done our best to design cabinetry to fit most ceramic grills, please refer to your ceramic grill manufacturer's specifications for compatibility, required height of the lower shelf and distance from obstructions to allow lids to open freely.

Bowed fronts on our ceramic grill cabinets allow clearance for lid to open while keeping the base cabinets at a standard depth.

item-code	price
CGCBPN33-MDR	3066
CGCBPN36-LDR	3650
CGCBPN36-XLDR	3918

Design Considerations:

- The bowed section of the 33-M unit is 27"W, 25"D on sides and **32"D to tip of radius**
- The bowed section of the 36-L unit is 30"W, 30"D on the sides and **36"D to tip of radius**
- The bowed section of the 36-XL unit is 30"W, 33"D on the sides and **40"D to tip of radius**
- Left & Right sides are 3"W pilasters finished with resin on the face and both sides
- Interior dimensions for grill: 33-M = 27"W x 27"D; 36-L = 30"W x 30"D; 36-XL = 30"W x 34"D
- Clearance from front rail to back of cabinet: 33-M = 29 3/4"D; 36-L = 33 3/4"D; 36-XL = 39 3/4"D
- Suspended cabinet is designed to be installed between base cabinets with finished end panel
- Shelf height from top of cabinet: 33-M = 14 1/2"; 36-L = 15"; 36-XL = 13 1/2"
- The 72-XL unit has a 3"H upper rail and the gap to the supporting shelf is 10 1/2". The other models have a 5"H top rail with a 10" gap (for the 36-L) and a 9 1/2" gap (for the 33-M) between the top rail and the shelf
- 34 1/2"H ceramic grill with end panels can be reduced to 30 1/2"H (not applicable to drawer options)
- The option with bowed drawer features full extension, side-mounted stainless steel drawer tracks
- The drawer is useful for charcoal or accessory storage

If Primo oval is used, the countertop will need to have a notch cut out to lower hinge.
Please refer to the spec sheets and cut out template for your model on www.primogrill.com.

- 15" from shelf to top of cabinet
- Middle rail is 3"H
- This cabinet ships separately as two side cabinets and the ceramic grill section with two loose resin panels to finish the interior of the ceramic grill area

Bowed Combination

C T

	item-code	price
M	CGCBSC63-M	4789
	CGCBSC69-M	4997
L	CGCBSC66-L	5005
	CGCBSC72-L	5235
XL	CGCBSC66-XL	5260
	CGCBSC72-XL	5530

Design Considerations:

- The M unit bowed section is 30"W (with 1 1/2"W pilaster C's on the sides). 24"D side cabinets and is 31"D to tip of radius
- The L unit bowed section is 33"W (with 1 1/2"W pilaster C's on the sides). 30"D side cabinets and is 36"D to tip of radius
- The XL unit bowed section is 33"W (with 1 1/2"W pilaster C's on the sides), 32"D side cabinets and is 39"D to tip of radius
- Side cabinets:
16 1/2"W for the 63"W and 66"W cabinets
19 1/2"W for the 69"W and 72"W cabinets
- Interior dimensions for grill:
M = 27"W x 27"D; L = 30"W x 30"D; XL = 30"W x 34"D
- Clearance from front rail to back of cabinet:
M = 28 3/4"D; 36-L = 33 3/4"D; 36-XL = 38 3/4"D
- Shelf height from top of cabinet: M = 14 1/2"; L = 15"; XL = 13 1/2"
- This combination cabinet ships in 5 pieces, allowing the ceramic grill to be adjusted to the optimal height before attaching the finished end panels (supplied for the interior gables) to the adjacent base cabinets

cooktop base
cabinets

cooktop base specifications

 NatureKast® Evo cooktop cabinets have been designed around the inherent characteristics of this distinctive cooktop to greatly enhance your outdoor cooking experience. The Evo Cooktop is a must-have for any outdoor kitchen, providing cooking versatility, distinct design and a social space for entertaining guests.

- Our current range of Evo cooktop cabinets are specifically **designed for the Evo Affinity 25G or 30G.**
- Evo 30G cooktop cabinets need to be 33"D at the sides, 25G needs to be 29"D (to allow sufficient countertop behind the cooktop), so please factor this into your design
- **Do not use the Evo trim kit.** The Evo trim kit requires a Grill Base cabinet of 45" or wider and 33" or deeper for the 30G and 39" or wider and 29" or deeper for the 25G
- Lid storage cabinets have grill panels, which are easily cut on site to fit the cooktop control panel height
- Our bowed drawer cabinets feature distinctive bowed drawers to increase storage space under the Evo circular cooktop. Aside from the obvious storage enhancements, it also looks better than allowing the control panel to protrude in front of a straight cabinet. We are the first cabinet company to offer this solution.

Inspired by Jack Wills Outdoor Living

^
The Evo combination cabinet offers the ultimate in storage and rich features.

<
Our unique bowed drawer design increases storage space below the radius of the Evo cooktop while adding a classy look to your backyard.

Evo Cabinet with 2 Bowed Drawers

COOKTOP NOT INCLUDED

item-code	price
GBEVO2D30_25G	3260
GBEVO2D33.5_30G	3449

Design Considerations:

- This cabinet has two 10"H bowed drawers and front rail is 3"H
- Side cabinets are 30" H (plus adjustable leg levelers).
- Sides are unfinished
- Features a 9"W spice cabinet and a 9"W organizer pull out
- When connecting the gas line, first attach an elbow connector to the Evo chassis to prevent needing to notch the top drawer
- Lid **will not** fit in these storage drawers
- Please specify countertop thickness when ordering

25G Unit Dimensions:

- Cabinet is 42" wide, bowed section is 33 ¼"D
- 28" deep side cabinets

30G Unit Dimensions:

- Cabinet is 45 ¾" wide, bowed section is 39 ¼"D
- 32" deep side cabinets

Design Considerations:

- This cabinet has two 10"H bowed drawers and front rail is 3"H
- Pilasters are 3"W, 34 ½"H & 33"D [30G] or 29"D [25G]
- The **cooktop drip tray overhangs the pilasters** and **must be** installed between adjacent cabinets to give counter overhang support at the sides
- When connecting the gas line, first attach an elbow connector to the Evo chassis to prevent needing to notch the top drawer
- Lid **will not** fit in these storage drawers
- Please specify countertop thickness when ordering

25G Unit Dimensions:

- Cabinet is 30" wide, bowed section is 34 ¼"D

30G Unit Dimensions:

- Cabinet is 33 ½" wide, bowed section is 40 ¼"D

IMPORTANT NOTE: Please do not install toe kick under the bowed drawer to allow air flow to the Evo cooktop or use grill vents

galley suite
cabinets

NatureKast Galley Workstation Suite specifications

🌿 NatureKast® takes our partnerships with high-end appliance manufacturers very seriously. So much so that we have built a storage solution to effectively cater for all the great Galley accessories when not in use. The result is the 🌿 NatureKast® Galley Workstation Suite. Aside from housing the Galley workstation; the drawers take care of all the great accessories that make a Galley Workstation so much more than just an outdoor kitchen sink. Interior dynamics have also been carefully considered to allow sufficient space for the plumbing requirements. Please introduce your plumber to the drawer configuration of your new Galley Suite to ensure plumbing is done correctly the first time

- Now features a **more compact drawer configuration** which allows **3 1/4" chase space** at the back of the cabinets for plumbing and space for the Galley Tap hose
- Galley Workstation Suite is 28"D to allow space for plumbing and all the accessories
- Full access, frameless construction with 3/4" thick cabinet backs
- Finished ends can be purchased loose or factory applied. Finished end panels add to overall width
- 100% stainless steel full extension soft-close side mount drawer slides (max weight: 77 lbs)
- 30"H plus an adjustable leg leveler (standard toe kick is 4 1/2"H)
- Drawer box trays feature racks and slots for all the accessories with eased edges and a weld-like bond, providing superior box strength.

Greatly enhance your Galley Workstation with our elegant storage suite.

base
cabinets

standard base cabinet specifications

All  NatureKast® boxes are constructed from 3/4" black or white PVC panels, which are 100% closed cell, making them completely weatherproof with a weld-like adhesive bond that provides superior box strength.

- Full access, frameless construction
- 3/4" thick cabinet backs
- 16" deep adjustable shelves
- 110° soft-close stainless steel concealed hinges
- Finished ends can be purchased loose or factory applied. Finished end panels are 3/4" thick
- 100% stainless steel full extension soft-close side mount drawer guides (max weight: 77lbs)
- Drawer boxes are constructed from PVC and have a 3/4" thick bottom
- Standard base cabinets are 30"H plus an adjustable leg leveler (standard toe kick is 4 1/2"H).

PVC drawer boxes 100% stainless steel full extension soft-close guides. The weld-like bond makes our drawer boxes virtually indestructible.

Our innovative design connects our doors to our trash pull-out unit, shown with our Shaker door style.

Pull-out trays with full overlay scooped front will never separate.

 NatureKast® interiors rival our exteriors in durability and beauty.

Insulated cooler drawer cabinets. New model shown here with additional storage shelf above cooler drawer.

Full Height XL Waste Bin

item-code	price
BXLTSO24	1453+785*

Design Considerations:

- 20 Gallon grey plastic waste bin
- Garbage bin is supported by a 3/4" thick solid floor and secured in place by a routed cabinet-matched PVC top shelf
- These cabinets come with two sets of full extension, side-mounted drawer tracks

slide out cabinets

Storage Hamper

C T E M

item-code	price
BHSO1D18	1336+460*

Design Considerations:

- 6"H top drawer for extra storage
- Slide-out with two storage hampers
- Cabinet Dimensions: 18"W x 34 1/2"H x 24"D

Spice

C T E M

item-code	price
SPOFH12(L,R)	1035+1024*
SPOFH15(L,R)	1128+1253*

Design Considerations:

- (L,R) refers to strategically positioned upper cabinet support brace – opposite side is more accessible
- Shelves are made of cabinet line matched PVC
- Top and Middle levels are adjustable and removable spice caddies
- One fixed bottom shelf
- These cabinets come with full extension, side-mounted drawer tracks

Cutlery & Spice

C T E M

item-code	price
CSPFH15(L,R)	1337+1108*

Design Considerations:

- (L,R) refers to strategically positioned upper cabinet support brace – opposite side is more accessible
- Shelves are made of cabinet line matched PVC
- Top adjustable shelf contains 6 stainless steel cutlery cups
- Middle level is an adjustable and removable spice caddy
- One fixed bottom shelf
- These cabinets come with full extension, side-mounted drawer tracks

Propane Pull Out

C T E M

item-code	price
PPOFH18 (L,R)	1052+606*

Design Considerations:

- (L,R) refers to door hinge location
- Propane pull out is cabinet line matched PVC and mounted on full extension, side-mounted drawer tracks
- Propane pull out has a hole cut in it to receive the bottom flange of standard 20 lbs BBQ propane tank
- Tank not included

cooler slide-out cabinets

CSOYFH39	2257+1883*
COOLER NOT INCLUDED	
CSOCFH36	2155+950*
CSOCFH39	2257+1100*

Design Considerations:

- (L,R) refers to door hinge location
- Pull out is cabinet-line matched PVC
- Will work with 21"W x 15 1/2"H x 16"D Yeti Ice Cooler (35 qt) or similar
- Cooler fits front to back in the pull out
- Full extension glides allow cooler to be opened completely when slide-out is fully extended
- Drainage hole in floor to allow cooler to be drained on to deck
- Additional storage drawer under the cooler slide-out tray

Design Considerations:

- Pull out is cabinet-line matched PVC
- Will work with 30 1/2"W x 16"H x 17.5"D Yeti Ice Cooler (65 qt) or similar
- Cooler fits from side to side in the pull out
- Full extension glides allow cooler to be opened completely when slide-out is fully extended
- Drainage hole in floor to allow cooler to be drained on to deck
- Additional storage drawer under the cooler slide-out tray

PLEASE NOTE: Sovaro coolers have been discontinued. Our Sovaro cabinets are no longer available.

Species available: **C** CypressKast **T** TeakKast **E** Euro **M** Metro

* Note: These values (*) are not subject to Door Style or Finish upcharges.

wall
cabinets

standard wall cabinet specifications

All  NatureKast® boxes are constructed from 3/4" black or white PVC panels, which are 100% closed cell, making them completely weatherproof with a weld-like adhesive bond that provides superior box strength

- Full access, frameless construction
- 3/4" thick cabinet backs. Screws can be used anywhere on the back panel
- Use washers with stainless steel screws when hanging wall cabinets
- Wall cabinets are 12" deep and come with full depth 3/4" thick PVC adjustable shelves
- Cabinet depth can be increased to 24" with Shelves set 3 1/2" from front of cabinet (See Cabinet Size Increase Modification charge)
- 110° soft-close solid stainless steel 35mm cup, hinge body, and back plate including 3 Hinges on full height doors
- Finished ends can be purchased loose or factory applied. Finished end panels are 3/4" thick for all door styles except Euro which is 1/2" thick
- When installing in full exposure, the top of the cabinets should have a finished panel to shade the PVC from prolonged sun exposure

standard tall cabinet specifications

All  NatureKast® tall cabinets are constructed from ¾" Black or White PVC panels, which are 100% closed cell, making them completely weatherproof with a weld-like adhesive bond that provides superior box strength.

- Bottom two doors are attached and open as one door
- There are 3 adjustable shelves in lower section and one in upper section
- 12" deep Tall cabinets come with full depth shelves and the shelves of 24" deep Tall cabinets are inset 3 ½" from the front of the cabinet
- Tall cabinets are great for cushion storage
- Center legs added for 30" and 36" wide tall cabinets for extra support
- Height of Tall cabinet is 90"H plus an adjustable leg levelers (standard toe kick is 4 ½"H)
- Overall height is 94 ½"H
- Finished ends can be purchased loose or factory applied. Finished end panels are ¾" thick
- When installing in full exposure, the top of the cabinets should have a finished panel to shade the PVC from prolonged sun exposure
- **Please ensure Tall cabinets are firmly secured to a wall - especially with Euro door style, to prevent toppling**

a game-changer...

The Ultimate Outdoor Game Cabinet: Introduced at KBIS & HPBA 2019

🌿 Tired of seeing the kids on their devices all the time? Put a NatureKast® Ultimate Outdoor Game Cabinet outside and score a bulls-eye with your family and friends. Make your backyard THE place to hangout. At just over 8' tall, this first-of-its-kind cabinet is full of fun and games. Enjoy Darts, the addictive Mölkky, bone-crushing Kubb and Kan Jam, all aesthetically integrated so that each game is ready for hours of outdoor fun. If you have the space and want to expand the gaming experience – get its twin and add other action-packed lawn games like Croquet, Boules, Bocce ball plus others.

If space is limited, our Ultimate Outdoor Dartboard Cabinet features the deluxe upper portion of the Ultimate Games Cabinet "A" and has been designed especially for dart enthusiasts.

Game on!

- Cabinet is 12"D and has unfinished sides, top and bottom

Louver: Weathered Desert Tan

insert cabinets

standard insert cabinet specifications

Until now, the only cabinets and door fronts available for structure type outdoor kitchens have been stainless steel. NatureKast® now offers a full line of PVC cabinet boxes with doors and drawers, along with our Insert frames with doors to access existing structure areas. Wood is a beautiful accent to stone, brick, or stucco structures, but that has not been an option for anyone looking for a long term, maintenance free product. With NatureKast® insert cabinets, that is now an option. Full height doors with frames, hinges, and open backs are available to access existing interiors.

- Cabinet is surrounded by a 3" frame that adds 6" to the overall indicated width and height of the cabinet
- The frame is finished to match the doors.

Contempo Matte Black: Fossil Grey (TeakKast)

suspended
cabinets

standard suspended cabinet specifications

All  NatureKast® boxes are constructed from ¾" black or white PVC panels, which are 100% closed cell, making them completely weatherproof with a weld-like adhesive bond that provides superior box strength.

- These suspended units have been designed for installation between our standard base cabinets, end panels or our support posts with side aprons provided to create a furniture-piece look
- The suspended cabinet gives an open and airy look, while providing easy cleaning below
- Suspended cabinets can also be used as inserts when combining units. Order the insert molding from the molding section to border the combined cabinets
- If suspended cabinets are used as inserts in fully exposed areas, insert molding or some type of trim border is required to help keep the rain out of the drawers and cabinets. This trim should be at least 1" deep as the drawer fronts and doors are 1" deep.

Design & Installation: Backyard Specialist

	TVBF4-CM6636	3580	52 1/2"	33"
	TVBF4-CM7836	3890	64 1/2"	33"

Design Considerations:

- This cabinet was designed without a top and bottom frame to be used between standard wall cabinets to maintain a consistent look
- This cabinet **MUST** include a **Crown Molding with Return (CRWNR)** and **Light Rail with Aluminum Support (LRA)** to correctly support this cabinet and to qualify for warranty
- Cabinet sides, top, and bottom of this TV cabinet is cabinet-line matched PVC
- Cabinet is supplied with one 96" length of crown molding and light rail with aluminum support
- Doors bi-fold and open 170°. They are held in place with magnetic catches
- Doors are mounted with stainless steel hinges
- Sizes listed above are overall cabinet width including side frame (3" on either side). Height size is cabinet box **excluding** crown molding and light rail
- Overall PVC cabinet box depth = 7"D

Shaker/Louver: Weathered Driftwood

hoods

shaker hood specifications

A fine example of the simplicity of the shaker design.

The Shaker hood by NatureKast® features a familiar traditional angled styling.

- Sizes: 42 ¾"W & 54 ¾"W, 36"H, 42"H & 48" high, 24 ¾"D or 31"D
- This hood is built in three sections, with an internal plywood structural frame
- Stainless steel laminate liner can be cut on site to fit most hood inserts
- Available in all Paint, Stain & Glaze and Weathered finishes
- Not available in TeakKast resin
- 100% weatherproof hood material can be used indoors or outdoors
- All hoods must be installed a minimum of 36" from the cooking surface. Check with local building codes and appliance specs
- Deeper hoods should be used over grill cabinets or any cooking appliance that is deeper than 24"

euro panel

1/2" Thick Phenolic Resin (HPL) Panel

E

item-code	price
BEUROCUSTPNL	0.61 (per square inch)

Design Considerations:

- 1/2" thick Euro panel at variable width and height
- Finished on front and back with ebony edge
- Check catalog specifications for cutting and bonding Euro panel
- **Grain direction (where applicable) matches the direction of the grain in the room**
- Maximum width is 72" & maximum height is 42"
- Can be used as an appliance panel or overlay door (input exact dimensions)

1/2" Thick Phenolic Resin (HPL) Panel

E

item-code	price
TEUROCUSTPNL	0.61 (per square inch)

Design Considerations:

- 1/2" thick Euro panel at variable width and height
- Order the appropriate panel size and rotate 90° if horizontal grain is required
- Finished on front and back with ebony edge
- Check catalog specifications for cutting and bonding Euro panel
- **Grain direction (if applicable) is vertical - see above**
- Maximum width is 30" & maximum height is 96"

appliance panels

Appliance Doors

item-code	price
APPLPNL2430	539
CONTEMPOAPPLPNL2430	539

Design Considerations:

- Available in custom sizes less than 24" W x 30" H
- Panels can be reduced in size at no additional cost
- 24"W x 30"H* is compatible with most under counter refrigerators
- 15"W x 30"H* is a common size for ice makers
- In most cases these standard sizes apply
- If resin appliance panels are reduced, there may be a discreet seam
- Panels will match the door style listed in the header information
- **For Euro and Metro appliance panels, please input exact size required in variable panel**

* Please note that these are recommended sizes based on our experience with most appliances.
Please refer to your manufacturer's specifications for exact requirements as we cannot guarantee the fit of our standard sized panels for all applications.

decorative overlay doors

* **Note:** Resin panels are NOT rigid and must be adhered to PVC cabinetry components using a Polyurethane adhesive like NP1 or PL Premium.

panels, fillers & pilasters

metro expansion fillers

3"W Metro Filler with PVC Expansion Backer

Profile:

M

item-code	price
3"	
EFB330	85
EFB336	94
EFB342	104
EFB396	192
EFB3108	204

Design Considerations:

- 3"W x 3/4" thick filler finished on face and 2 long edges
- 3/4" thick x 1 1/2" W PVC backer to allow Metro panel expansion and contraction due to temperature fluctuations
- Allow 1/4" expansion space to overlapped panels
- Total thickness = 1 1/2"

6"W Metro Filler with PVC Expansion Backer

Profile:

M

item-code	price
6"	
EFB630	143
EFB636	156
EFB642	177
EFB696	288

Design Considerations:

- 6"W x 3/4" thick filler finished on face and 2 long edges
- 3/4" thick x 4 1/2" W PVC backer to allow Metro panel expansion and contraction due to temperature fluctuations
- Allow 1/4" expansion space to overlapped panels
- Total thickness = 1 1/2"

Metro Outside Corner Expansion Filler

Profile:

M

item-code	price
ECFB3336	200
ECFB3342	248
ECFB3396	578

Design Considerations:

- Overall dimensions: 3"W x 3"W x [36", 42" or 96"H]
- 3/4" thick resin fillers at 90° (inverted) finished on both 3"W outside faces and both long edges
- 3/4" thick x 1 1/2" W (x 3/4" thick x 1 1/2" W) PVC L-backer to allow Metro panel expansion and contraction due to temperature fluctuations
- Allow 1/4" expansion space to overlapped panels
- Especially useful for hiding corner joints on islands and peninsulas

Features and considerations

- Metro expansion fillers have a $\frac{3}{4}$ " thick PVC Expansion Backer that is recessed $\frac{3}{4}$ " at each end of filler to allow Metro Panel expansion and contraction due to temperature fluctuations
- Install Metro Expansion fillers between Metro panels. *Allow $\frac{1}{4}$ " expansion space to overlapped panels

raised counter walls

* Raised Bar Walls have been designed to allow easier installation of raised counter tops:

Raised Bar Wall

Profile:

item-code	price	species*
RBW42	27.3 (per linear inch)	C,T,M
RBWVG42	27.3 (per linear inch)	C,T
RBW42-0.5	38.5 (per linear inch)	E

Design Considerations:

- 42"H (please specify lower if required)
- To be installed on back of base cabinets
- Price per linear inch of wall length
- Minimum length is 20"
- Maximum length is 60" but may be extended by using additional Raised Bar Walls
- These do not have End Caps and are to be used as internal wall pieces
- Wall is 2 1/4" thick
- Can be built with V-groove panels
- V-groove walls should be ordered 24" to retain lap-joint

Raised Bar Wall With End Cap

Profile:

item-code	price	species*
RBWEC42	31.5 (per linear inch)	C,T,M
RBWECVG42	31.5 (per linear inch)	C,T
RBWEC42-0.5	44.5 (per linear inch)	E

Design Considerations:

- 42"H (please specify lower if required)
- To be installed on back of base cabinets
- Price per linear inch of wall length
- Minimum length is 20"
- Maximum length is 60" but may be extended by using additional Raised Bar Walls
- End cap is 3" wide with a 2" return
- Wall is 2 1/4" thick at the ribs
- Can be built with V-groove panels
- V-groove walls with end caps should be ordered 21"-23" to retain lap-joint

Features and considerations

- Raised bar walls need to be securely attached to the cabinets to provide a solid base for the counter tops
- Posts are used to cover the joints between the finished panels. Corbels can be attached to these to support the bar counter tops
- Backsplash should be attached above the base cabinets after counter has been installed
- End Cap Walls have a 2" return that will add to the length of the wall at the end of the cabinet run
- If designing an L-shaped configuration, allow 2 1/4" behind the cabinets when calculating the raised bar wall lengths needed

- Made of Resin
- Finished on 3 sides
- Order to trim around suspended cabinets that are used as insert cabinets

planks

Ship Lap V-Groove Plank

C T

item-code	price
CP36	121
CP42	148
CP96	210
CP120	265

Dimensions:

- 3/4"D x 6"H

Widths available:

- 36"W, 42"W, 96"W & 120"W

Design Considerations:

- Can be used for complete ceiling or wall applications to match outdoor cabinetry
- Finished on the face and 2 long edges
- Can be used to cover tight radius structure applications

furniture bases

6"H Furniture Base

CT

item-code	price
FBM696	206

Design Considerations:

- ¾"D x 6"H x 96"W
- Manufactured at 6"H to allow for scribing to match rain pitch of deck
- Finished on the face and 1 long edge

6"H Furniture Base with Return

CT

item-code	price
FBMR696	323

Design Considerations:

- 2 ¼"D x 6"H x 96"W
- Manufactured at 6"H to allow for scribing to match rain pitch of deck
- Finished on the face and 1 long edge

toe kick

Toe Kick

CTM

item-code	price
NK596	118
NK5108	160
NK796	172
NK7108	205

Resin Design Considerations:

- ¾"D x 5"H or 7"H x 96" or 108"W
- Finished on the face and 2 long edges

Metro Design Considerations:

- ¾"D x 5"H or 7"H x 96"W
- Finished on both sides with colour-match core
- For information on bonding Metro toe kick to PVC, see page 31

Euro Toe Kick with Vertical Grain

E

item-code	price
NK672EURO-V	172

Design Considerations:

- ½"D x 6"H x 72"W
- Grain direction is vertical
- Finished on front and back with ebony edge
- Only available for Wood Decors
- For information on bonding Euro toe kick to PVC, see page 30

Standard Euro Toe Kick (Horizontal Grain)

E

item-code	price
NK696EURO-H	215

Design Considerations:

- ½"D x 6"H x 96"W
- Finished on front and back with ebony colored edge
- For information on bonding Euro toe kick to PVC, see page 30

Euro: Pure White

Louvers: Weathered Driftwood

pvc components,

pvc panels & components

Black & White PVC Panels

item-code	price
PVC PANEL 2436	173
PVC PANEL 4836	346
PVC PANEL 396	58
PVC PANEL 696	115
PVC PANEL 1296	230
PVC PANEL 2496	460
PVC PANEL 3096	575
PVC PANEL 3696	690

Design Considerations:

- 3/4" thick PVC panel
- PVC color will match cabinet box construction
- Used as a structural component and MUST be covered with resin if exposed to direct sunlight
- For non-listed sizes, select the next largest panel and reduce down.

PVC Toe Kick

item-code	price
NK796PVC	134

Design Considerations:

- 3/4"D x 7"H x 96"W
- Cabinet line matched PVC
- Used as a structural component and MUST be covered with resin if exposed to direct sunlight

PVC Appliance Spacer Panel

item-code	price
PVCAPPLSP1536	125
PVCAPPLSP2036	150
PVCAPPLSP2136	155
PVCAPPLSP2436	170

Design Considerations:

- PVC spacer for appliance installation
- Provides suitable substrate for attaching finished back panels behind a fridge or other free-standing appliance
- 3/4" thick cabinet line PVC
- [15, 20, 21, 24"]W x 36"H
- Input exact width required (up to 1" wider or 1" narrower)

Profile:

3" x 3" x 96" PVC L-backer

item-code	price
PVCL3396	186

Design Considerations:

- PVC L-backer for cleating and installation
- Cabinet line matched PVC

Overall dimensions:

- 3"W x 3"H x 96"D
- 3/4" thick cabinet line PVC

Profile:

6" x 6" x 6" PVC U-Chase Box

item-code	price
PVCU666	98

Design Considerations:

- PVC U-shaped box for electrical receptacles
- Cabinet line matched PVC

Overall dimensions:

- 6"W x 6"H x 6"D
- 3/4" thick cabinet line PVC

Profile:

- The item-code correlates to the size of the base cabinet, not the overall slide out tray width
- 4"H or 8"H PVC slide out tray with a scoop detail on the front
- Installed into cabinet with 100% stainless steel full extension soft-close glides
- Front, sides and back panels are 1/2" thick, floor is 3/4" thick.

* No hardware sold separately.

pvc structural corner base

3" x 3" Inside Corner Filler Base

C T M

item-code	price
PVC33CFB2424	1458
PVC33CFB2428	1579
PVC33CFB2824	1579
PVC33CFB2828	1703

Design Considerations:

- Inside corner filler is 3" x 3" and will be same finish as the room in the quote
- Sizes match standard base cabinet (24"D) and grill cabinet (28"D) depths
- Cabinet width is 27 ¾"D for a 24"D side and 31 ¾"D for a 28"D side
- First depth listed in the SKU (eg. 24) is left side depth and second depth is right side of the cabinet box
- Standard base cabinet height is 30"H plus adjustable leg levelers (standard toe kick is 4 ½"H)
- ¾" thick cabinet line PVC

accessories

Camlock for Door/Drawer

item-code	price
CAMLOCK	122

- Stainless steel camlock for doors or drawers
- Priced per lock
- Elbow latch is required on cabinets with 2 doors
- Each keyed differently

Elbow Latch

item-code	price
ELBOW LATCH	75

- Stainless steel elbow latch
- Priced per latch
- Installed on top of base cabinet doors and bottom of wall cabinet doors

Sealed Magnetic Catch

item-code	price
MAGNETIC CATCH	47

- Sealed catch for doors and drawers
- Set includes magnet and stainless steel plate
- Available in black or white to match cabinet box

* No hardware sold separately.

Touch Up Kit

item-code	price
TOUCH UP KIT	60

- Touchup kit for resin cabinetry
- Contains formulation specific to finish selected (painted, stain & glaze or weathered finish)
- Has appropriate FilStick to match base colour

NK Drill-in Push

item-code	price
NKPUSH	22

- Allows for spring-loaded opening of doors and drawers without handles
- Only works with motion hinges and soft-close drawer slides
- Concealed in cabinet gable or stretcher
- Adjustable standoff
- Available in black or white to match cabinet box

Weather Seal Gasket

user-code	price
WSGASKET	0.71 (per linear inch)
WSGASKETWH	0.98 (per linear inch)

- 60 Duro EPDM weather seal with pressure sensitive adhesive
- Can be applied to drawer and door cabinets
- Use mechanical fasteners like staples to improve seal integrity
- When installed, bulb compresses to $\pm 0.125"$, so drawer tracks may need to be adjusted. Adjustment is not typically required for soft-close drawer slides
- Door hinges may also require a minor adjustment (not Contempo/Euro/Metro)
- Consider using magnets to ensure a good seal
- Available in black or white

marine-grade hardware

6 1/4" Bar Pull with Almond-Eye Posts

6" Bow Pull

item-code	price
NK-BP	26

- 6" 316 stainless steel bow pull
- 1 3/32" Projection (overall)

* No hardware sold separately. Screws included.

We recommend 316 Marine Grade Stainless Steel for hardware as it performs best in most outdoor environments. If your installation is in an area with high chlorine content, extra steps are required to maintain your hardware to prevent corrosion. This applies equally to hinges, drawer slides and appliances.

Adjustable Counter Bracket

item-code	price
BRKT8"	158
BRKT10"	171
BRKT12"	183

Installation Kit and Requirements

Hardware Included:

- A - Floating Surface Adjustable Bracket (1)
- B - Allen head set screws (2)
- C - Phillips head wood screws (2)
- D - Allen wrench (1)

Tools Required:

- Phillips screw driver
- 3/8" drill bit
- Caulk
- Router
- Wood chisel

Bracket Installation Requirements:

- Wall thickness between 3/4" - 4" (add material if < 3/4")
- Must be placed directly under seams in countertop
- Used for overhangs between 8" and 18"

- Designed to allow easier installation of floating surfaces
- Full installation instructions included with product
- Includes required fasteners
- Manufactured by Steel Design Solutions using American-made structural steel (1/4" thick)
- Powder coated to guard against corrosion. Can safely be used outdoors without the threat of rust as long as the powder coating is not damaged
- Warranty covered by a limited 12 Month Manufacturers Warranty
- The bracket size is determined by the wall thickness and overhang length. See Table below:

OVERHANG LENGTH

WALL THICKNESS	8"	9"	10"	11"	12"	13"	14"	15"	16"
3/4"	8"	8"	8"	10"	10"	10"	12"	12"	12"
3"	10"	10"	10"	12"	12"	12"			

- Generally, you will need one bracket every 12-18". As a rule-of-thumb, use 2 brackets for 24-28", 3 brackets for 29-48", 4 brackets for 49-68", 5 brackets for 69-88" and 6 brackets for 89-108"
